1-113 (canceled).

114. (currently amended) A method for providing video-on-demand, comprising:

using a TV system to present to a user's Web browser a list of links, each link corresponding to a respective piece of television video-on-demand;

receiving a selection of a link;

in response to the selection, sending a protocol file to the TV system, the protocol file including a TV channel corresponding to the video-on-demand associated with the selection and a size and location of a video layer within a markup language layer; and

causing a channel tuner of the TV system to tune to the TV channel corresponding to the video-on-demand associated with the selection.

115. (previously presented) The method of Claim 114, wherein the TV system includes a set-top box (STB), the STB presenting to the user's Web browser the list of links.

116. (currently amended) The method of Claim 114, wherein the set-top box provides an Internet layer and a video layer to the user's web browser, the browser being directed to render a portion of the Internet layer transparent to establish a transparent Internet portion, the transparent Internet portion having a size and screen location specified in the protocol file, the video layer being presented in the transparent Internet portion.
